

# WMS Selection & Implementation

## Requirement:

- Lead client through the selection and implementation of a warehouse management system
  - Requirements? Best of Breed vs. ERP module? Fully integrated with ERP, WCS and TMS?

## The Process:

- Analyze Distribution Requirements:
  - Comprehensive review of operations from Receiving through Shipping
  - Evaluate needs from Order Entry, Inventory Control, Finance, Returns, Transportation
- Assess current processes and recommend improvements
- Develop bid specifications around requirements definition
- Evaluate vendor responses based on cost, closeness of fit, modification requirements, company experience, etc.
- Develop implementation plan with selected vendor
- Lead systems implementation process (Configuration, Testing, Training, Start-Up)

## Results:

- Implement a systems solution that best meets the specific needs and requirements for the client.

- Above is a partial listing of clients using systems selected and implemented using our methodology.

### Typical Output:

- # Facilities
- Location & Size of Each
- Products in Each Facility
